Non-Profit HCJB Global Selects Paragon Software's Drive Backup Server and Virtual Editions to Ensure Business Continuity

"We evaluated similar software solutions to cost-effectively backup our systems, but nothing came close to Paragon's backup and restore software."

— Ron With, Network Administrator

The Challenge and Search for the Perfect Solution

As a non-profit dedicated to bringing health services to disadvantaged people and promoting Christianity through media, HCJB Global has limited finances to invest in disaster recovery software.

When they consulted with their information technology reseller, he could offer nothing within their price range that could fulfill their needs. HCJB Global decided to conduct a search for affordable backup and restore software on their own. They came across Paragon Software Group's Drive Backup Server and Virtual Editions.

"While evaluating Paragon's Drive Backup software, we discovered a host of other features we had never considered in our original search," said Ron With, Network Administrator of HCJB Global. "Seeing all it could do really opened our eyes to the possibilities."

The Bottom Line

"When we compared Paragon's Drive Backup software to the other solutions recommended by our consultant, nothing came close for the price — it offered an intuitive interface, auto-scheduler, and ultimately peace of mind," continued With. "The Virtual Edition helps us save capital to fund our mission by enabling backup and instant server restore using virtual machines, not expensive hardware."

Drive Backup Server and Virtual Editions Feature Highlights

Paragon Drive Backup is a powerful image-based backup and [disaster recovery](#) solution that protects data, minimizes downtime, and lowers data storage and management costs while ensuring business continuity through instant system recovery. Live server migration technology (P2V, V2P, V2V and P2P) makes conversions easy and allows you to leverage virtual environments for powerful and flexible disaster recovery strategies.
